

*silver*COMM SIGNAL MIRROR INSTRUCTIONS

Since the 1940's, the use of mirrors for signaling purposes has been a proven and reliable communication method. The *silver*COMM Shatterproof Signal Mirror and the COMMout Mirror Suite have been carefully crafted to offer users a variety of applications. Users include search and rescue, adventurers, mariners, and the military. Signaling with a mirror is simply redirecting the sun light to a specific place or target so that the flash of the mirror can be seen by someone in the target area. To use the mirrors follow the Helpful Hints:

Align mirror and aim at target

Helpful Hints

1. Remove protective film from face of mirror.
2. Face into the sun.
3. Practice before use on a mission.
4. Use the aiming port or cross hairs.
5. Slightly rock the mirror to make it flash.
6. For instructions on use of the mirrors view a video on our website as noted below.
7. Secure mirrors to a lanyard or use enclosed ball chain.
8. Protect mirrors with Tyvek case.

The effective distance for the *silver*COMM Signal Mirror varies based upon atmospheric conditions, weather, sunlight intensity, solar and lunar angles and the skill of the user.
